NAFIS KAMAL

Full-Stack Software Engineer | Programmer

Dhaka, Bangladesh • +880 1631-383295 • nafis.kamal.ii7@gmail.com

GitHub: Nafis-Kamal-CodeQuest • **LinkedIn:** nafis-kamal-657250373 • **Portfolio:** nafis-kamal-codequest.github.io/Portfolio

PROFESSIONAL SUMMARY

Full-stack developer with 200+ LeetCode problems solved and one deployed project. Proficient in Python, Django, FastAPI, and modern web technologies. Experienced in system design, API development, and offline-first architecture. Currently developing TurfSync (sports turf booking platform) and ScholarMate (AI research workspace with local RAG).

CORE COMPETENCIES

Languages: Java, Python, JavaScript, C, SQL

Backend: Django, Django REST Framework, FastAPI, API Design, OAuth 2.0

Frontend: HTML5, CSS3, Tailwind CSS

Databases & Tools: PostgreSQL, MySQL, SQLite, Supabase, Git, VS Code

Core Concepts: Data Structures & Algorithms, System Design, OOP, Version Control, RAG Pipelines

PROBLEM SOLVING

LeetCode: 200+ Problems Solved

Expertise: Data Structures, Graph Algorithms, Dynamic Programming, Binary Trees, Linked Lists

PROJECT EXPERIENCE

TurfSync – Sports Turf Booking & Matchmaking Platform

July 2026 – Present | *Python, Django, PostgreSQL, SQLite, Tailwind CSS, REST APIs*

Designed and engineered a multi-app sports management ecosystem featuring transaction-protected, 60-minute time-slot booking alignments and automated player overlap check-constraints.

Built a custom team matchmaking system allowing captains to list teams open for pairing, handle member invitations, transfer captaincy, and coordinate fixtures.

Integrated secure OAuth 2.0 via Google Authentication for seamless user onboarding and developed a localized rating system (Asia/Dhaka timezone) with built-in abuse prevention logic.

Implemented a custom signals layer mapping distinct events (e.g., auto-canceling opponent posts upon booking cancellations) while maintaining a clean, unidirectional app dependency graph.

ScholarMate – Offline-First AI Research Workspace

July 2024 – Present (4-Semester Iterative Development) | *Flutter, FastAPI, Supabase (PostgreSQL), SQLite Vector, Ollama, Google Drive API*

Developed a local Retrieval-Augmented Generation (RAG) pipeline integrating local embeddings and SQLite Vector to run local semantic search, enabling offline document querying without cloud dependencies.

Engineered custom offline-first caching mechanisms to synchronize Google Drive document states locally for seamless PDF reading, text highlighting, and dynamic progress visualization.

Patched critical security vulnerabilities by integrating proper Google OAuth 2.0 verification across sensitive backend routers and token-storage endpoints.

Resolved intricate, system-wide state synchronization bugs, tracing and correcting downstream Google ID vs. Supabase UUID caching mismatches.

PlantWise – AI-Powered Plant Disease Detection Web Application

February 2026 – Present | *Django, TailWind, MySQL, KindWise API*

Architected and developed full-stack web application integrating machine learning API for automated plant disease detection and classification.

Implemented image upload module with real-time ML predictions and generated treatment recommendations based on disease classification.

Developed blog and discussion features enabling community engagement and knowledge sharing among users with production-ready deployment.

Banking System (GUI) – Object-Oriented Programming Project

September 2024 – October 2024 | *Java, Swing GUI Framework*

Designed and implemented graphical user interface-based banking system with account creation, fund transfers, deposits, withdrawals, and real-time balance tracking. Applied OOP design principles (encapsulation, inheritance, polymorphism) with comprehensive error handling and input validation.

Personal Finance Tracker with Visualization – Data Analysis Project

July 2024 – August 2024 | *Python, Matplotlib, Data Visualization*

Developed Python-based personal finance tracking application for income and expense monitoring with automated data recording. Created comprehensive Matplotlib visualizations for financial data analysis, trend tracking, and budget management insights.

EDUCATION

Bachelor of Science in Computer Science and Engineering | North South University

July 2022 – June 2026

PROFESSIONAL ATTRIBUTES

Analytical Problem-Solving • Clean Code Development • Full-Stack Capabilities • System Design • Team Collaboration • Adaptability • Self-Directed Learning • Attention to Detail • Time Management
